

**INSTRUCTIONS**

The recommended torque for Velcon threaded castings elements is 300-lb. (dead-end). Our GTP-1224 socket adapter is made to be used with a 1/2" drive torque wrench such as our catalog item GTP-1206 with a 0-100 ft-lb range.

Be sure that the socket adapter is fitted at the way on the square boss of the element.

Place one hand on the socket adapter, as shown in the sketch, to hold it firmly in place before attempting to apply torque with the torque wrench. Use the same care that you would use in tightening a spark plug. **HOLD THE SOCKET ADAPTER FIRMLY.**
